

Santa Catalinas And The Old Hat Mining Districts

(Arizona Daily Star.)

The picturesque range of the Santa Catalinas, closely following the border line between Pima and Pinal counties, has by prerogative of merit, been the favorite haunt of the pleasure seeker during the summer months. The western limits are to the north of Tucson, distant about fifteen miles as the crow flies. Why the titanic forces that fashioned mountain and plain were diverted from their usual course, placing this range of mountains transversely from west to east between the San Pedro and Santa Cruz valleys, is a matter beyond the conception of the finite mind. The fact that the lavish distribution of numerous other ranges; all paralleling directly opposite points of the compass does not warrant the conjecture that the trivial circumstances of accident had anything to do with it. To the appreciative observer, the grandeur of these mountains can not be exaggerated and their broad expanse of summits measured by miles, not by acres, and covered with a lofty growth of pines and the many other varieties of trees and shrubbery, impresses one with the thought that the desert and waste places must be far away.

It is only in recent years that any methodical and systematic develop-

ment of the mineral resources of the Catalinas has been undertaken, but the demands of a progressive day warrant the search for additional ore bodies of commercial utility and intensive operations are now being carried on in the very shadow of the place.

Apaches Camp. The Apache camp is located on the northern slope of the range, well towards the eastern extremity, and has a commanding view of the San Pedro valley. Here a close corporation of national reputation is operating under bond the Glensman and Leatherwood properties. The working shaft is down about 450 feet, with extensive lateral development at the different levels, but the results of the work are not authoritatively given for publication. About fifty men are employed.

Adjacently located to the above are the Daily claims, fourteen in number; the Hartman group and in the near vicinity the property of E. O. Stratton and associates and in all of which considerable money has been expended. The Foran group, under option to V. L. Davis, has been equipped with machinery capable of deep exploration. The Del Monte property, under the management of Donovan & Walker, of nine claims, the Simpkins and Martinez claims, all are located in this vicinity.

The prevailing character of the ore of this district is a chalcopryite, carrying gold and silver in addition to the copper values.

Campo Benito. To the north and west of Apache camp and at a lower altitude is the scene of the Cody-Dwyer M. & M. company's operations. The company has thirty-six locations here and a forty-ton mill has been installed. The ore is a scheelite gold ore that yields to the milling and concentrating process.

The Southern Bell, owned by the Cody-Dwyer interests, is now under bond to Capt. Jack Burgess. The property consists of nine patented and four unpatented claims, a patented mill site and a ten stamp mill.

Pepper Sauce Gulch is the location of the "Buffalo Bill" claims, consisting of twelve in number.

The Cody-Dwyer and the Cody-Burgess combinations own and control several groups in addition to the foregoing that are receiving more or less practical attention.

The ore in the vicinity of Campo Benito is in places a disseminated sulphide carrying gold and silver values. Oxidizing agencies have freed the values to a considerable extent from their base combinations, making amalgamation practicable to a certain extent.

LECTURERS DEPART OFFICIALS PLEASED

Casus Belli of Sunday Night Riot Permanently Sent from District

The police feel greatly relieved now that T. Rozovich and T. Nastich, the two lecturers with liberal ideas as to government in Montenegro, have left the city. They left Sunday afternoon for the east, but it is not known whether they are returning to Chicago, or will give their lectures in other parts of the southwest. Both are well educated and apparently refined gentlemen, but their presence here tended to disturb opposing factions, and their departure will remove the immediate cause of the trouble that started the riot a week ago Sunday.

The case of the state against Pete Gukonovich, who was arrested on the night of the riot, which was to have been tried yesterday afternoon after having been three times postponed, was postponed again yesterday. The previous hearing of the cases resulted in a disagreement in the jury, though on the first ballot they stood eleven to one for conviction. The postponement yesterday afternoon was made on account of the fact that Deputy County Attorney Alexander Murry was called to Tombstone on county business and will be there during all this week. The case will be heard next Monday afternoon at 1:30 o'clock.

FINE EXHIBIT OF HANDIWORK

Bisbee Scholars Show Marked Ability in Display at Central School Building

IS CREDIT TO ALL

The exhibit of the work done by the drawing, domestic science and manual training departments of the schools of the Bisbee district now being held at the Central School is very interesting. This primary work consisted of stories illustrated with clay models, cradles, chicken coops and rocking horses made of paste board. There were also Christmas boxes and Holland Indian dolls. The illustrated story of "The Bird Woman of Lewis and Clark's Expedition" was very good. It consisted of canoes, Indian tents and papoose cradles. The Mexican work of hats, napkin rings and wheelbarrows and carriages for a house consisting of parlor, dining room, kitchen and bedroom, made of paste board were novel. Especially interesting were the articles that were woven. There were muffs, sweaters, caps and rugs of wool and raffia, also fish nets and hammocks. The original cross stitch designs shown on aprons by the fourth grade showed good work. Then there were baskets, some oak, some little and some beautifully decorated and made by all the different grades of the school. The drawing included the work of all grades from the cut out illustrations of the little tots to the splendid work of the High School pupils, and the drawings in water color, original book cover designs and models of clay are worthy of mention. The table of jack knife construction done by the boys of grades four and five was very interesting. Here were displayed articles to illustrate different modes of travel, air ships, wagons, sailing vessels, a prairie schooner, also, row boats and a sedan chair. One table was attractive with stenciled work of pillow tops, bags, curtains and table covers done by the members of the High School. Miss Schlatterer's first grade at Lowell had a sand table representing Lincoln's early life and Miss Messer's class had a sand table depicting the early life of the Pilgrims. Miss Anna Wilmer, the drawing teacher, had charge of the exhibit and deserves much credit for the good showing.

Miss Spelman, who has charge of the domestic science department, had a good display of dresses, gowns, kimono, hand embroidered sewing aprons, underwear, towels, waists, baby dresses, pin cushions, traveling cases, bags, pillow tops and many other useful and attractive things. The work of these children must be seen to be appreciated. It is a great thing to teach the children how to make useful things while they are young.

The manual training class in charge of Mr. Murray had a fine display of useful articles consisting of a chair, trophy case, hat rack, book case, knife box, sleeve boards, music cabinet, library table, tooth brush holder, magazine racks, tabourettes, letter boxes, whisk broom holders, match boxes, towel racks and waste paper baskets. The articles showed good workmanship and do credit to the instructor and the pupils.

The parents and friends of the pupils will have a chance to see the exhibit at the Central School during certain hours every day and for a couple of hours in the evening. It is well worth a visit.

WIFE SEEKS CLUES OF MISSING HUSBAND

Bartolo Devote Disappears from Home—Absent for Week Past

For the past week Bartolo Devoti, well known through the district as a contractor, and who has lived hereabouts for a number of years, has been missing from home, thus causing deep anxiety to his wife. It is seven days since he left home, his wife stated to a representative of The Review, and she will be deeply grateful to any one who can give her any information relative to the whereabouts of the missing man, whom she fears is still somewhere, since he was not feeling well when he disappeared.

Mrs. Bartolo Devoti was a caller at The Review office yesterday, seeking aid from the paper to secure information of her husband, whom she stated had disappeared seven days previously. She is employed in a laundry in this city, and was away at work when he left, he having been staying at home to look after one of their seven children. He had been complaining of a pain in his side previously. She has not seen or heard from him since.

Devoti is an Italian who married a Mexican. His wife states that he is between sixty and seventy years of age, and that they reside up Tombstone canyon. When there was much contract work done by the city, Devoti was a contractor, and employed in a considerable portion of it. His wife asks that any information as to his present whereabouts be given her or sent to The Review.

TEXAS PYTHIANS IN SESSION

WACO, TEXAS, May 13.—A week of interest in Pythian circles was ushered in here today with the arrival of many delegates to the annual session of the Texas grand lodge of the

If You Like a Little Quiet Fun

Ask some pompous person if **Grape-Nuts Food** helps build the brain.

Chances are you get a withering sneer and a hiss of denunciation. Then sweetly play with the learned toad.

Ask him to tell you the analysis of brain material and the analysis of Grape-Nuts.

"Don't know? Why, I supposed you based your opinions on exact knowledge instead of pushing out a conclusion like you would a sneeze." "Well, now your tire is punctured, let's sit down like good friends and repair it."

The bulky materials of brain are water and albumin, but these things cannot blend without a little worker known as Phosphate of Potash, defined as a "mineral salt."

One authority, Geohagan, shows in his analysis of brain, 5.33 per cent total of mineral salts, over one-half being Phosphoric Acid and Potash combined. (Phosphate of Potash) 2.91 per cent.

Beaunis, another authority, shows Phosphoric Acid and Potash (Phosphate of Potash) more than one-half the total mineral salts, being 73.44 per cent in a total of 101.07.

Analysis of Grape-Nuts shows Potassium and Phosphorus (which join and make Phosphate of Potash) is considerable more than one-half of all the mineral salts in the food.

Dr. Geo. W. Carey, an authority on the constituent elements of the body, says: "The gray matter of the brain is controlled entirely by the inorganic cell-salt, Potassium Phosphate (Phosphate of Potash). This salt unites with albumin and by the addition of oxygen creates nerve fluid or the gray matter of the brain. Of course, there is a trace of other salts and other organic matter in nerve fluid, but Potassium Phosphate is the chief factor, and has the power within itself to attract, by its own law of affinity, all things needed to manufacture the elixir of life."

Further on he says: "The beginning and end of the matter is to supply the lacking principle, and in molecular form, exactly as nature furnishes it in vegetables, fruits and grain. To supply deficiencies--this is the only law of cure."

Brain is made of Phosphate of Potash as the principal Mineral Salt, added to albumin and water.

Grape-Nuts contains that element as more than one-half of all its mineral salts.

Every day's use of brain wears away a little.

Suppose your kind of food does not contain Phosphate of Potash.

How are you going to rebuild today the worn-out parts of yesterday?

And if you don't, why shouldn't nervous prostration and brain-fag result.

Remember, Mind does not work well on a brain that is even partly broken down from lack of nourishment. It is true that other food besides Grape-Nuts contains varying quantities of Brain food.

Plain wheat and barley do. But in Grape-Nuts there is a certainty.

And if the elements demanded by Nature, are eaten, the life forces have the needed material to build from. A healthy brain is important, if one would "do things" in this world.

A man who sneers at "Mind" sneers at the best and least understood part of himself. That part which some folks believe links us to the Infinite.

Mind asks for a healthy brain upon which to act, and Nature has defined a way to make a healthy brain and renew it day by day as it is used up from work of the previous day.

Nature's way to rebuild is by the use of food which supplies the things required.

"There's a Reason" for

Grape-Nuts

POSTUM CEREAL COMPANY, LIMITED, BATTLE CREEK, MICHIGAN, U. S. A.
